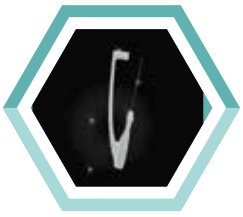
Aspire Mini-Lift

Reg. $15,500

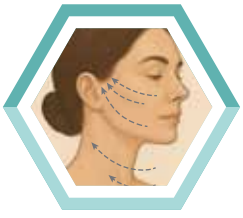


Facetite:

A cutting-edge radiofrequency technology that removes fat and tightens the fibrous septal network (FSN)—the structure that anchors skin to muscle. With age, the FSN stretches, leading to sagging skin, "turkey neck," and jowls. FaceTite targets deep layers once only accessible with surgery, restoring a tighter, more youthful contour.

Morpheus8:

An advanced radiofrequency microneedling device that melts fat and firms skin more effectively than previous methods. It safely reaches deep tissue and high temperatures without damaging the surface, also tightening the FSN at more superficial levels.



Suture Suspension:

The latest upgrade to our mini-lift procedure, providing longer-lasting support to sagging neck, jawline, and jowls.

Anti-Age Stem Cell Growth Factor Kit:

Every treatment includes stem cell growth factors to accelerate healing and enhance results. Each kit contains a post-treatment serum and a 10-day care regimen with a healing accelerator, hyaluronic acid, bio-gel, and a gentle cleanser.

Our Brand NEW! Proprietary Collagen Regrowth Formula:

A potent blend of GHK-Cu, estriol, vitamin C, niacinamide, and tretinoin. This science-backed serum improves elasticity, smooths fine lines, boosts collagen, and restores a radiant, youthful glow.
